

Looking ahead to COP16:

KEY CONSIDERATIONS FOR A MULTILATERAL MECHANISM FOR DSI

10 & 11 September, 2024 | Webinar

AGENDA

- Translating good intentions into an effective system to leverage DSI use in support of the GBF
- Understanding how DSI is stored and shared: Implications of an interdependent ecosystem of databases for policy options
- Accounting for non-monetary benefits in the new DSI mechanism
- Future-proofing the multilateral system

CBD COP16 will be an important milestone in bringing to reality the much-awaited multilateral system for benefit sharing from the use of DSI. Many questions remain to be addressed before this new mechanism can be put in place, and the devil will be in the details.

Experts from the DSI Scientific Network will discuss key aspects of the current DSI landscape that have important implications for the operationalisation of the multilateral mechanism. The discussion will also look ahead to considerations for “future-proofing” the benefit sharing system, so that it is effective in the face of technological and policy developments.

The webinar will take place on two dates at different times to facilitate broad participation.
